Certification

I, the undersigned attorney, certify as to the release of the Civil Justice as Code debt-track rules corpus tagged debt-demo-v1.0 in the repository `github.com/andrewmichaelcohen-a2j/a2j-ai` (19 nodes; per-node SHA-256 hashes in `rules/debt/validation/debt_demo_v1.0_manifest.json`), as verified on the dates recorded in that manifest, that:

1. **Every node was audited against its cited primary sources** under the published census-audit protocol (`docs/audit/README.md`): the node's logic and completeness checklist were read in full; every citation carrying a url was either live-verified by the corroboration runner's citation checker or manually verified by me against the cited source; provisions named in notes but not pinned are listed on the node's sheet and were either checked or carried to the v1.1 backlog.
2. **Every material adversarial finding was dispositioned** as recorded in the disposition ledger (`rules/debt/validation/stage_b_dispositions.json`) and the triage record (`docs/DEBT_STAGE_B_TRIAGE.md`): fixed with a verified source, fixed with a named source, ruled on by me as counsel (`docs/DEBT_COUNSEL_QUEUE_V1.md`), recorded as covered elsewhere, or carried to `docs/POST_V1_BACKLOG.md` with its materiality and dangerous-direction classification. Any dangerous-direction row left open on a promoted node is identified on that node's sign-off sheet with my reason for promoting it.
3. **The metrics are as recorded** in the measurement-of-record entry of the manifest (run `run_20260905T175137Z`): Stage A three-model grounded agreement, citation verification, Stage B parse health, and the count of findings surfaced and dispositioned, reported raw and as dispositioned.
4. **Tier labels are mine.** Each node's tier (DRAFT / CORROBORATED / VALIDATED) at this release was set by me on the node's sign-off sheet after steps 1-3, and only nodes so signed carry a tier above DRAFT.

What this certification does not do

- It **does not warrant any outcome in any individual matter**. The corpus encodes rules, thresholds, and screening questions; whether they apply to a person's facts, and what a court will do, is not certified.
- It **is not legal advice to any person**, and no attorney-client relationship is created by its use. Output derived from the corpus is legal information. Anyone relying on it for a decision should consult a lawyer.
- Its **scope is limited to the tagged release** (debt-demo-v1.0) and the verification dates in the manifest. Law changes; the release carries a freshness commitment (quarterly re-verification, manifest `freshness_commitment`) but no representation that a citation remains current after its verification date.
- It covers **process compliance**, not completeness: the corpus addresses the 19 nodes it contains, in the jurisdictions it names, and nothing else; known gaps are listed in `POST_V1_BACKLOG.md` and the HORIZON list.
- It is **an individual attorney's certification of process**. Co-certifiers, an editorial board, and institutional governance are out of scope for this release and are not implied.

Signature

Certifying attorney: _____ Bar: _____

Release tag: debt-demo-v1.0 · Manifest sha256 of debt_demo_v1.0_manifest.json at signing:

Cowork's note for ratification: the four attestations in the Certification section are worded to be true only after the counsel session and the census audit are complete; signing before then would attest to something not yet done. Wording changes are Andy's; nothing here is final until he says so.
